

The L20B4 inductor is an inductor with interchangeable ferrite for deep heating. This inductor is supplied as standard on the Powerduction 220LG. The L20B4 can be used for industrial mass heating, dent removal and much more...

For more information on the correct use of the inductor and the position of the inductor during heating, please refer to the product manual on gys.fr.

Mandatory software version of the generator: V6.52

INDUCTOR IN ACTION

Straightening on stainless steel/steel chassis

Hardening of steel axle

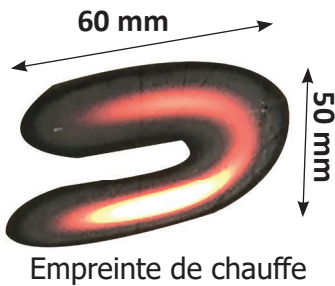

L20B4
067882

L180B4
079786

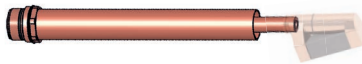

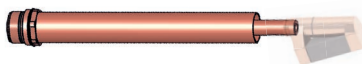

RECOMMENDED USES

Optimum use	Possible uses	Use Not Recommended
Mass heating Industry Dégrippage TP HGV garage	Preheating Straightening Dent removal Hardening Heating on aluminium and copper	Small parts Thin sheet

PRODUCT COMPATIBILITY

Powerduction :

39LG	058583	+ Optional 28L adaptor (064492)	
39LG	080027		
50LG	055599		
110LG	058590	With 32L adapter already supplied (064515)	
110LG	065246		
160LG	057814		
160LG	065253		
220LG	066861		
220LG	074576		

Accessories :

Ferrite protection		054844
Ferrite		053755
Glue kit for inductor	 + 	075948
